

MIT ACADEMY OF ENGINEERING
FINAL YEAR BTECH SEMESTER - VII EXAMINATION 2026 – 2027
DEPARTMENT OF COMPUTER ENGINEERING
GENERATIVE ARTIFICIAL INTELLIGENCE (PEC Students)
COURSE CODE: 2304422L **NOVEMBER 2026**

DATE:

MAX MARKS: 30

Pedagogy: Project Based Learning

Assessment Type: Project-Based Demonstration, PPT & Presentation

1. GENERAL INSTRUCTIONS:

- I. Everybody must come in formal dress and carry a college I-Card and hall ticket for the examination.
- II. Every student must sign on two attendance sheets after the presentation.
- III. Students must design, implement solutions for the decided problem statement and prepare the project finding/summary report/article and presentation slides for the project demonstration.
- IV. Write your Name, Seat Number, PRN number at the top of every page/ file.
- V. Plagiarism is strictly prohibited. If it is found that the contents are copied (both information and program) from internet sources or other students or from any project then assignment will be evaluated directly with zero marks.
- VI. Assessment Panel: The project examination will be conducted jointly by appointed examiners.
- VII. Equal Contribution: Each project member is required to contribute equally in the following aspects: Project Implementation, Demonstration, and Presentation.
- VIII. Contribution of each student shall be clearly visible.
- IX. Refer to the rubrics for project implementation, demonstration, presentation, documentation and Reviews as mentioned in the given tables.

Submission Instructions:

Each student must submit the following:

1. Jupyter Notebook / Python Script (.ipynb or .py) containing: Complete code for data loading, preprocessing, model training/fine-tuning, evaluation, and testing.
2. Dataset: Either upload the dataset used (if small) or provide a valid link to the dataset source (e.g., Kaggle, Hugging Face Datasets, etc.).
3. Model Files: Include any saved model checkpoints or links to Hugging Face models if fine-tuned.
4. PPT File: Submit a clear, concise PowerPoint presentation (6–8 slides) summarizing your problem, approach, results, and ethical considerations.
5. GitHub Repository Link: Upload all your project files to a GitHub repository and submit the link, Repository must include:
 - README.md with project overview, setup instructions, and usage guide.
 - Code scripts and notebooks
 - PPT and references (if any)
 - Any additional assets (images/audio, etc.)
6. README File:
Include instructions for running the code, installing dependencies, model usage, etc. Mention your name, roll number, and project title.

Mapped Course Outcome:

CO1: Analyze Generative AI models and diffusion models to generate data across various domains like images, text, and music [L4].

CO2: Evaluate the performance of Generative AI models for real world applications [L5].

CO3: Deploy generative AI for practical applications such as image synthesis, data augmentation, and creative content generation [L6]

Evaluation Criteria (30 Marks)

Component	Criteria	Excellent (5)	Very Good (4)	Good (3)	Average (2)	Poor (1)	Max Marks	COs	Mapped POs	RBT Level
1. Practical Implementation	Correctness of code, Use of Gen AI techniques, Code efficiency and readability, Handling of errors/exceptions	Complete and error-free implementation with advanced techniques ; clean, efficient, well-commented code	Mostly correct with minor errors; uses appropriate Gen AI methods; readable code	Functional code with some errors; basic Gen AI usage; code readability moderate	Partial implementation; some major errors; code difficult to follow	Code does not run or is largely incorrect; no meaningful Gen AI approach	12	CO3	PO3, PO5	L6
2. Demonstration & Comparative Analysis	Proper execution of the model Ability to explain steps during demo, Response to inputs and outputs, Handling unexpected inputs, Model performance comparison using graphs, tables, and critical interpretation	Flawless demo, clear explanations of all steps; handles all inputs smoothly	Good demo with minor lapses; explains most steps clearly	Basic demo, some steps unclear; demo works but limited explanation	Demo partially works; explanation is vague or unclear	Demo fails or no explanation given	6	CO1, CO2	PO2, PO4, PO5	L4, L5

3. PPT Quality	Content relevance and accuracy, Clarity and organization- Visual appeal (use of diagrams, flowcharts) , Proper referencing and slide layout	Content is complete, accurate, well-organized; visually engaging slides with clear diagrams	Content mostly accurate and relevant; slides well-organized; good visuals	Adequate content but lacks clarity in parts; slides average in layout and visuals	Content incomplete or some inaccuracies; slides poorly organized or cluttered	Content missing or irrelevant; slides very poorly designed	6	CO1 CO2	PO10	L4, L5
4. Presentation Skills	Clarity of speech, Engagement with audience, Time management, Confidence and professionalism	Clear, confident speech; very engaging; well-timed; professional demeanor	Mostly clear and confident; engages audience; minor timing issues	Speech mostly clear but lacks engagement; timing slightly off	Speech unclear or rushed; poor engagement; poor timing	Speech very unclear; no engagement; disorganized	6	CO1, CO2, CO3	PO9, PO10	L4, L5, L6

Rubrics for Practical Implementation (12 Marks):

Criteria Area	Excellent (3)	Very Good (2.5)	Good (2)	Average (1.5)	Poor (1)	Marks	COs	Mapped POs	RBT Level
1. Problem Definition & Data Collection	Clearly defines problem scope, objectives, and expected outcomes; collects relevant, sufficient, and high-quality data from multiple sources.	Defines problem well with minor clarity issues; collects relevant data, but could be more comprehensive.	Problem defined but lacks depth; data collected is adequate but limited in scope or quality.	Problem definition vague or incomplete; data collected is minimal or partially irrelevant.	Problem not defined or unclear; data collection missing or poor quality.	3	CO1	PO1 , PO2, PO4	L4
2. Data Preprocessing & Model Selection	Through preprocessing with appropriate cleaning, normalization, augmentation; selects the best-fit Gen AI model with justified reasons.	Preprocessing done well with minor gaps; selects suitable model with basic justification.	Basic preprocessing performed; model selection is acceptable but justification weak or generic.	Preprocessing is minimal or inconsistent; model selection lacks reasoning.	No preprocessing or inappropriate preprocessing; model selection is missing or wrong.	3	CO1, CO2	PO1, PO2, PO3, PO5, PO12	L4, L5
3. Training / Fine Tuning & Evaluation	Implements effective training or fine-tuning with clear explanation; uses suitable evaluation metrics and provides insightful analysis of results.	Training and fine-tuning mostly effective ; evaluation metrics chosen appropriately; analysis adequate.	Model training done but limited fine-tuning; evaluation metrics basic; analysis superficial.	Training incomplete or flawed; evaluation lacks appropriate metrics or analysis.	Model training missing or incorrect ; no evaluation or analysis done.	3	CO2, CO3	PO1, PO4, PO5, PO11 PO12	L5 , L6
4. Testing, Iteration,	Conducts thorough	Testing and	Basic testing	Limited testing;	No testing	3	CO2, CO3	PO3, PO5,	L5 , L6

Deployment / Interface / Ethics, Bias & Safety	testing with iterations improving performance; deploys with functional interface; addresses ethics, bias, and safety proactively.	iteration done with minor gaps; deployment functional; mentions ethics and bias.	and iteration; deployment is partial or interface limited; minimal ethics consideration.	deployment missing or incomplete; ethics/bias considerations absent or minimal.	or deployment; no mention of ethics, bias, or safety concerns.			PO6, PO7, PO8, PO9, PO10
